

Job Description

Registered nurses (R.N.s) work to promote health, prevent disease, and help patients cope with illness. They are advocates and health educators for patients, families, and communities. When providing direct patient care, they observe, assess, and record symptoms, reactions, and progress; assist physicians during treatments and examinations; administer medications; and assist in convalescence and rehabilitation. R.N.s also develop and manage nursing care plans; instruct patients and their families in proper care; and help individuals and groups take steps to improve or maintain their health. While State laws govern the tasks R.N.s may perform, it is usually the work setting, which determines their day-to-day job duties. *Hospital nurses, office nurses, nursing home nurses, home health nurses, public health nurses, occupational health or industrial nurses, head nurses or nurse supervisors, nurse practitioners, clinical nurse specialists, certified registered nurse anesthetists, and certified nurse-midwives* are classified as advanced practice nurses and have met higher educational and clinical practice requirements beyond the basic nursing education and licensing required of all R.N.s.

Skills Needed

- Speaking
- Service Orientation
- Social Perceptiveness
- Judgment and Decision Making
- Reading Comprehension
- Coordination
- Critical Thinking
- Active Listening
- Problem Identification
- Writing

Preparation and Licensing Requirements

Possible Degrees

- Associate Degree (A.D.N.)
2 to three years at community/junior colleges
- Bachelor of Science (B.S.N.)
4+ years at college or university

Licensing

This occupation requires a license in Missouri. The Missouri State Board of Nursing gives the licensing exam to graduates of accredited nursing programs. A passing grade is required for licensure. Advanced practice nurses may have additional licensing requirements

Job Outlook

- Job opportunities for R.N.s are expected to be very good.
- Employment is expected to grow faster than the average for all occupations.
- Many new jobs will result.
- Thousands of job openings will come from the need to replace retiring nurses.

Faster than average growth will also be driven by technological advances in patient care, which permit a greater number of medical problems to be treated, and an increasing emphasis on preventive care. In addition, the number of older people, who are much more likely than younger people to need nursing care, is projected to grow rapidly.
